

hello,

git

why git?

“Because we want to build better software together, though we work differently we end up at the same point, we make stuff”

what's git?

- git is a **version control system**

what's git?

- git is a **version control system**
- git is the **main place** for all your files

what's git?

- git is a **version control system**
- git is the **main place** for all your files
- git is the place where your files will have a **revision history**

what's git?

- git is a **version control system**
- git is the **main place** for all your files
- git is the place where your files will have a **revision history**
- git also allows you to **merge changes** in the same file

what's git?

- git is a **version control system**
- git is the **main place** for all your files
- git is the place where your files will have a **revision history**
- git also allows you to **merge changes** in the same file

“Version control is also an
awesome tool for designers”

benefits of git

- files **cannot** be overwritten.

benefits of git

- files **cannot** be overwritten.
- **common repository** that holds the latest files.

benefits of git

- files **cannot** be overwritten.
- **common repository** that holds the latest files.
- designers can work on the same file **simultaneously** without conflict.

benefits of git

- files **cannot** be overwritten.
- **common repository** that holds the latest files.
- designers can work on the same file **simultaneously** without conflict.
- can be a **lifesaver** backing up your files.

benefits of git

- files **cannot** be overwritten.
- **common repository** that holds the latest files.
- designers can work on the same file **simultaneously** without conflict.
- can be a **lifesaver** backing up your files.
- make developers **very very happy** :)

meet git

git push

git pull

git init
git add
git commit
git status

meet git

\$git add
